1. State Space Formulation and PEAS Representation for a Self-Driving Car

2. State Space Formulation and PEAS Representation for a Vacuum Cleaning Agent

3. State Space Formulation and PEAS Representation for a Chess-Playing Agent

4. State Space Formulation and PEAS Representation for an AI-Based Medical Diagnosis System

5. Program on Uninformed Search Methods: Depth-First Search (DFS)

6. Program on Uninformed Search Methods: Breadth-First Search (BFS)

7. To implement Alpha-Beta Pruning to find the optimal move in a game tree.

8. Write a Program to Simulate a Fuzzy Control System for a Real-World Application

9. Implement an Associative Memory Network to Store and Retrieve Patterns

10. Develop a Single-Layer Perceptron Neural Network Using the Perceptron Learning Rule

11. Implement a Multilayer Perceptron (MLP) Using Supervised Learning and Backpropagation

12. State Space Formulation for the Water Jug Problem and Solve It Using a Search Algorithm

1. State Space Formulation and PEAS Representation for a Self-Driving Car

2. State Space Formulation and PEAS Representation for a Vacuum Cleaning Agent

3. State Space Formulation and PEAS Representation for a Chess-Playing Agent

4. State Space Formulation and PEAS Representation for an AI-Based Medical Diagnosis System
